Managed Firewall Service

New generation firewall protection

Securicom's Managed Firewall Service goes beyond perimeter protection; providing new generation web / UTM security features as well. The solution combines best-of-breed technologies from trusted providers.

These are innovatively packaged and delivered as a single service to ensure:

- Perimeter protection
- Daily security posture checking against the baseline
- Secure web browsing
- Web content and URL filtering
- Bandwidth management
- Secure remote connectivity
- Secure site-to-site (office-to-office) communication
- Online reporting of traffic, internet activity and security posture of the internet-facing side of the network

The best rolled into one

With **Securicom Managed Firewall Service** there is no need to buy, deploy and manage various point solutions. Companies simply subscribe to the service and **Securicom's** experts maintain the solution to ensure that it provides complete protection against evolving perimeter and web-based threats.

End-to-End Service consisting of:

- Pre-implementation consultancy
- Design of a connectivity security policy
- Once off vulnerability assessments
- Deployment of best-of-breed technologies
- Around-the-clock monitoring and support

Subscription benefits:

- No capital outlay
- Low cost of ownership
- Securicom installs, monitors and maintains the solution
- Best-of-breed technologies
- Access to specialised security resources 24/7/365
- No vendor lock-in

SECURING YOUR INTELLECTUAL PROPERTY

No Fuss, No Risk

Securicom's Managed Firewall Service is non-invasive to your infrastructure and there are no special system requirements, apart from internet connectivity, to get your company protected. The solution is Ethernet-based to maximise compatibility with current technologies that might be in place on the perimeter.

Securicom installs the devices and conducts a scan on the internet facing IPs to determine the security baseline. Thereafter, daily posture checking scans are run and compared to the baseline. Any deviations or incidents are immediately logged and the client is made aware of the risk. Vulnerabilities can either be remedied, or accepted as the new baseline. All new software updates are rolled out to clients' firewall devices following stability testing in Securicom's lab environment.

Securicom Managed Firewall also features a user-friendly online management portal which provides company administrators with tools for managing low risk functions and reviewing configurations.

Monitoring is continuous and in real-time to provide rapid notification of fault conditions and to ensure that all critical rules and policies are operating within defined limits.

The Securicom difference

- **Best-of-breed firewall appliances** packaged as an integrated service
- **Daily security posture checking** against the baseline
- **New generation web security features**
- **Fully-maintained** and monitored by **Securicom**
- Access to **IT security experts**
- Annual **vulnerability assessments**
- **User-friendly online dashboard** for managing low risk functions and system configuration
- **Online reporting** for up-to-date view of network security posture
