Securicom Managed
Intrusion Detection Service

securi·protect

Vigilant network watchdog

Securicom Managed Intruder detection Service (IDS) is a standalone intrusion alert and prevention service that:

- Monitors and inspects all incoming packets for suspicious patterns, exploits or malicious content
- Stops external attacks that evade conventional firewall defences
- Identifies emerging threats for which no signature has yet been developed
- Protects valuable assets from external attacks
- Ensures proactive alerts on possible threats
- Provides visibility into attacks
- Delivers scheduled reporting on attacks
- Ensures proactive and effective management of incidents

High alert

Securicom Intrusion Detection Service (IDS) is a network-based solution for identifying and preventing external attacks on the network. Using industry-leading **IDS** devices which are innovatively packaged with other necessary security technologies and delivered as a managed service, **Securicom IDS** ensures peace of mind that all external attacks on the network are detected and blocked before IT security is compromised.

It complements the network firewall, detecting and stopping attacks that evade conventional perimeter protection defences by inspecting the packets within the gateway for malicious content.

SECURING YOUR INTELLECTUAL PROPERTY

Securicom IDS is offered on a subscription basis so there is no capital outlay. The service includes pre-implementation consultancy and a comprehensive IT security posture check to devise the most appropriate implementation plan.

Securicom's team of experts installs the **IDS** devices and associated security products. The **IDS** sensors can be deployed invisibly on the network to work with current configurations with no major changes to the current routing/ switching infrastructure. They can also be deployed in a high availability configuration to ensure a single hardware failure doesn't bring down the whole network.

On guard

Subscribing companies have access to support from **Securicom's** team which monitors and maintains the system infrastructure and devices around the clock. All security events on the system are logged and managed within **Securicom's** Help Desk system. Customers receive automated alerts on all events that are considered important.

When necessary, or when a customer escalates an incident for investigation, **Securicom** will investigate and provide remediation advice.

Full visibility

Securicom IDS features a convenient web-based console that allows subscribing companies to view reports on the activity on their **IDS** system. The portal allows for incident event filtering so that customers only receive alerts on events that are considered important in terms of their specific security requirements.

There is also a user-friendly dashboard which offers an overview of the security posture of the system and statistics on events and incidents that have taken place. From the dashboard, companies can get a breakdown of activity on the system for the past seven days and see which **IDS** events were detected and blocked. The dashboard also gives details regarding the top ten attackers, the attack distribution and the top attack signatures.

What this means is that subscribing companies are always up to speed on events and incidents that could compromise the security of their infrastructure and business information.

Features

Robust, best-of-breed intrusion detection capability

- **Detects** and **prevents attacks** before they impact security
- **Detects attacks** for which there are no threat signatures
- **Fills the gaps not secured** by traditional firewall defences
- Ensures **optimal security posture** at all times

SECURING YOUR INTELLECTUAL PROPERTY

Fully-managed by Securicom

- Devices are **installed by experts**
- **24x7 management and monitoring** by **Securicom** engineers
- Access to **qualified experts**
- **No need for** a dedicated **in-house resource** to manage and maintain the solution
- **Securicom** takes care of **upgrades** and **maintenance**
- **Securicom** investigates and provides **remediation advice**

Offered on a subscription basis

- **No** capital outlay
- **Reduced overall** total **cost** of ownership
- Tangible **ROI results**
- Various **options** to suit the company **budget**

User-friendly online console and dashboard

- **Central portal** providing visibility of the status of the network
- **Up-to-date information** about activity of events and activity on the system
- **Reporting** capabilities
- **Ability to track status** of incidents and investigations
