# MailVault

Smart email archiving and retrieval

**Securicom MailVault is a smart, simple and reliable email archiving and retrieval solution.**

**The solution provides:**

- Reliable, real-time back up of electronic communication
- Business continuity in the event of an email system failure
- A central archive of incoming, outgoing and internal electronic messages
- Simple email sorting, search and retrieval capabilities
- Viewing and replaying of lost or deleted messages
- Easy access to email messages at all times using any web-enabled device
- Ability to send and receive messages from within the archive
- Compliance with the requirements of the South African Electronic Communications and Transactions (ECT) Act and various other pieces of legislation that indirectly prescribe the retention or archiving of electronic communication.

**No storage needed**

**Securicom** MailVault is a smart solution that helps companies to easily and efficiently manage their email lifecycle. MailVault is specifically designed and structured with the small business in mind. With **Securicom** MailVault, companies have a central archive of all email communication for ten years. The archive is housed off-site, at a secure data centre.

**Securicom** MailVault is fully-hosted and managed in the cloud at a secure data centre by **Securicom**. Companies subscribe to the service, which means

- No capital outlay
- Low cost of ownership
- Securicom takes care of storage requirements as the archive grows
- Email archive is housed at a highly secure data centre
- 24/7/365 monitoring support by Securicom's security experts
- Securicom manages upgrades and maintenance to the system

## No bother

**Securicom** MailVault is completely “touch-less” to your infrastructure. Journaling is simply enabled on the email system and copies of email communication are sucked into the cloud where they are stored securely for ten years.

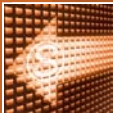

The solution provides complete and reliable real-time backup of all electronic communication in a central archive that is equal to housing a fully-redundant system for email archiving and retrieval, but without the high cost.

**IT administrators have full visibility into the archive via a secure online portal which provides tools for:**

- Configuring domains and settings
- Managing aliases
- Auditing user visits and actions taken by users
- Visibility into company mail via the MailVault Dashboard.
- Configuring archiving policies including selecting domains to be archived and the modification of end-user logins and aliases.
- Viewing and restoring lost or deleted messages.

An interactive search interface allows end-users to quickly and easily search their personal archive directly from any browser to locate the messages they need; cutting down on help desk queries and improving productivity.

### The MailVault Difference

- Delivered as a **managed service**
- Offered on a **subscription** basis
- **Hosted in the cloud**
- Utilises technology developed by **Securicom engineers** to ensure local relevance
- **Secure online management portal** for IT administrators
- **User-friendly portal** for end-users to access, retrieve and send emails
- **Central archive** of electronic communication
- **Easy access to information** contained in email messages
- Varying **security access levels**
