Securicom Managed Endpoint Protection

Securicom's Managed Endpoint Protection is a comprehensive set of software that is designed to solve endpoint security problems and provide threat protection for all sizes of enterprises and companies, from the smallest to the largest.

Securicom's Managed Endpoint Protection Service provides advanced threat protection that protects your endpoints (laptops, desktops, and servers) from both known threats and those threats that have not been seen before.

Centralized Endpoint Management

Securicom's Managed Endpoint Protection protects against malware and threats such as:

- Viruses
- Worms
- Trojan horses
- Spyware
- Abuse of company assets by employees
- Adware
- Unauthorised access to company computers and servers

It provides protection against even the most sophisticated attacks that evade traditional security measures such as rootkits, zero-day attacks, and spyware that mutates.

Securicom's Managed Endpoint Protection also allows you to maintain fine-grained application and device control while it provides multiple layers of protection for all your endpoint computing devices.

No admin

Securicom's Managed Endpoint Protection Service is fully managed and fully hosted by **Securicom** at a highly secure data centre. It combines best-of-breed endpoint protection technologies with **Securicom's** own-developed security solutions, around-the-clock monitoring and extensive expertise in one comprehensive managed service. **Securicom's Managed Endpoint Protection Service** is offered on a subscription basis:

- No capital outlay
- Low cost of ownership
- No client administration
- 24/7/365 monitoring support by Securicom's security experts
- **Securicom** takes care of upgrades, health checks and maintenance to the system
- No special system requirements

All points from one point

Securicom's Managed Endpoint Protection Service integrates essential and comprehensive security technologies in one convenient system. These include:

- Antivirus
- Antispyware Threat Protection
- Firewall
- Intrusion prevention
- Device and application access control
- Proactive Threat Protection
- Network Access Control

These robust technologies are deployed as one agent on each physical machine to provide advanced threat protection.

Securicom's Managed Endpoint Protection secures and protects infrastructure and ultimately the health and security of each machine and it is centrally managed in the cloud by security experts. Securicom's team applies security content updates to subscribing companies' management servers and endpoints to ensure that their assets are protected against the latest threats even when roaming.

The service is highly scalable and can accommodate companies of any size.

Endpoints are monitored 24/7/365 as part of the service. Security events affecting protected endpoints are quickly identified, analyzed and escalated for remediation by Securicom's team. **Securicom Endpoint Protection Service** secures both physical and virtual environments. The service can be bundled with any of Securicom's other security services to provide unmatched protection from all fronts and all levels.

Snapshot of events

Subscribing companies have access to an easy-to-use online management console (dashboard). From the online portal, company IT administrators can:

- View security incident notifications
- Assess outage incidents and reports
- Analyse security incidents in real time

The Securicom's advantage

- Proven world class advanced threat protection
- Ability to maintain fine-grained application and device control (memory sticks, pocket drives, digital cameras, etc)
- Utilises best-of-breed technologies packaged as an integrated managed service
- Centralised management and analysis of security of multiple endpoints
- Ongoing monitoring by Securicom's security experts
- Hosted in the cloud to reduce client risk
- Endpoint security infrastructure kept updated for unmatched protection against latest threats
- Secure access to online portal for viewing security, outage incidents and reports
- Immediate response to incidents by Securicom's team of experts and assessment of impact to enterprise
- Desired policy management – updates and enforcement
- Can be bundled with any of Securicom's other managed security services
- Helping to ensure network-wide compliance with security and information-privacy policies or standards
- Controlling access by unmanaged endpoints, including guests, contractors, partners, temps, wireless access points, and remote users
