

SecuriScan

securi•app

For an **educated view** of your company's **IT security posture**

Securicom's advanced vulnerability and security scanning service, SecuriScan provides:

- An accurate view of the security posture of the IT environment
- Insight into vulnerabilities that could impact business performance, data security and regulatory compliance
- Actionable intelligence to guide decisions and action plans for remedying vulnerabilities in order to improve the organisation's IT security posture

Best technology, qualified advice

SecuriScan is an advanced web-based vulnerability and security scanning service. It is fully-hosted and managed by **Securicom** at a secure data centre. Companies can request a once-off vulnerability assessment or subscribe to the ongoing security scanning service.

- No capital outlay
- Low cost of ownership
- Access to advice and support from IT security professionals (CISSP)
- Best of breed technology monitored and maintained by experts
- **Securicom** takes care of upgrades and maintenance to the system to ensure optimal functionality

SECURING YOUR INTELLECTUAL PROPERTY

Once off vulnerability assessment

A comprehensive once-off vulnerability assessment is conducted on the organisation's IT infrastructure. Clients receive a full report and advice from a qualified IT security consultant. There are two options. Companies can select one, or both.

- External audit (Internet-facing infrastructure)
- Internal audit (Local area network)

Ongoing security scanning

Organisations can subscribe to the web-based security scanning service which offers the ability to perform regular vulnerability scans on the internet-facing infrastructure.

A dedicated scan engine can also be setup for regular audits of the LAN infrastructure.

Organisations have full control of configuring and scheduling security scans via a dedicated, secure online management console. Subscribing clients have the ability to schedule and generate reports in a range of formats.

The SecuriScan advantage

Once-off Scan

- The audit is performed by an IT security expert
- Utilises advanced assessment technology
- Requires minimal input from the client
- Comprehensive report presented by a qualified security consultant
- Accurate view of the security posture of the IT environment
- Actionable intelligence to guide decisions and measures to improve the security status of the IT environment

Subscription Service

- Utilises advanced assessment technology
- Full control of configuring and scheduling scans
- Access to a secure online management console
- Advanced reporting capabilities
- Accurate and up-to-date view of security at all times
- Access to the latest threat information
- Enables companies to be proactive about addressing vulnerabilities
- Can be used to ensure adherence with corporate IT security policy and regulatory compliance
- Fully hosted and managed upstream to reduce risk, costs and administrative burden
- Unobtrusive
- System is monitored and updated by IT security professionals
- Access to a team of specialised IT security experts (CISSP professionals)
