# Securicom Managed WAN Optimisation Services

Affordable application performance optimisation

**Securicom Managed WAN Optimisation Services (WOS)** is an advanced application optimisation solution that:

- Speeds up access to, and improves performance of business critical applications over wide area networks
- **Optimises bandwidth utilisation** between sites
- **Prevents bandwidth wastage**
- Reduces network congestion
- Addresses wide area file services, QoS, traffic shaping and web caching
- Allows companies to consolidate IT
- Facilitates **faster disaster recovery**
- Allows for real-time collaboration between users

**Securicom's Managed WOS** is a holistic service that addresses a host of problems that debilitate enterprise applications operating across the WAN and deliver LAN-like access to data and applications throughout the network. The solution utilises Riverbed's industry-leading WDS (Wide-area Data Services) technology which is packaged with a range of value-added services and delivered as a fully-managed service by Securicom.

**Securicom Managed WOS** is offered on a subscription basis and companies simply lease the devices. The service includes full network analysis, installation and monitoring by **Securicom**. This means there is no need for companies to purchase, deploy or manage the technology.

**Securicom offers two activation models:**

- **Managed Implementation Service** – **Securicom** provides support for the planning, system engineering and overall project management for the **Managed WOS** implementation.
- **Managed Replacement Service** – **Securicom** replaces a customer's existing WOS network.

## Unified Solution

The solution encompasses application acceleration; WAN optimisation; wide area file services (WAFS); QoS and traffic shaping and web caching within a single, unified architecture. Companies can therefore tackle all of the issues that affect application performance over the WAN with one solution.

**Securicom Managed WOS** dramatically improves the throughput of applications that organisations rely on everyday; including file sharing, email, backup, SSL, document management systems and IT tools, as well as ERP and CRM solutions.

**Securicom** has built an Application Analysis service into the solution. This feature provides performance analysis, capacity audits, and recommendations for increasing network performance.

**Securicom Managed WOS** features a user-friendly web-interface which allows the IT administrator to check the status of the network, and analyse network traffic and application performance. The solution boasts extensive reporting capabilities enabling companies to make informed decisions about designing and modifying their networks for better performance and bandwidth utilisation.

## Features

### Best-of-breed, industry-leading technology

- Used and trusted by companies all over the world
- Encompasses application acceleration, WAN optimisation, wide area file services (WAFS), QoS and traffic shaping and web caching within a single, unified architecture
- All issues affecting application over the WAN can be addressed with one solution

### Fully-managed by Securicom

- 24x7 management and monitoring by Securicom engineers
- Access to qualified experts
- No need for a dedicated in-house resource to manage and maintain the solution
- Proactive management and trouble-shooting ensures optimal network availability
- Securicom takes care of upgrades and maintenance

## Offered on a subscription basis

- No capital outlay
- Reduced overall total cost of ownership
- Tangible ROI results
- Various flexible rental and purchase options to suit the company budget

## Application Analysis Service

- Allows for proactive network reviews
- Enables modifications to the network to be facilitated in a timely manner
- Provides the administrator with actionable information
- Increased uptime and network efficiency at all times

## Regular tuning of optimisation appliances

- Appliances remain tuned for optimal performance
- Solution evolves with the company's needs for application performance
- Appliances are tuned to perform within the scope of the network design
- Network runs efficiently at all times, even when requirements change

## User-friendly online portal

- Central portal providing visibility of the status of the network
- Generate reports
- Activate standard traffic graphing
- Update notification requirements.
